

# CardioRad

Imaging | Prevention | Outreach

Manage more of your patients' care - keep the revenue that comes with expanded ancillary services.

CardioRad brings the multi-specialty clinic to your practice.

We add specialists and clinical decision support for enhanced patient care and profitability.

We believe that patients should have a medical home and that continuity of care improves quality of care.

## CardioRad Texas

904 W. McDermott Dr., Suite #116  
Allen, TX 75013  
(972) 636-1173

Our approach to ancillary services and prevention not only improves continuity of care and outcomes – *it significantly increases your profit.*

### CardioRad enables physicians to keep patients in their practice longer.

We offer something that local specialists, the hospital and even imaging centers can not provide. With CardioRad you can bill for in-office procedures and keep the profit. Referring out patients' ancillary care can result in significant loss of revenue and patients. With expanded ancillary services a practice can generate an extra \$20-100k a year and retain their patients.

### CardioRad Provides

1. A new source of income and a great way to replace lost practice revenue
2. On-site carotid IMT, echocardiography, EMG/nerve conduction, holter monitor, nuclear, stress-echo, ultrasound and vascular imaging
3. Assistance with pre-authorizations, coding and reimbursement

### Team Approach

At CardioRad we use a team approach that facilitates optimal image acquisition, prompt interpretation and timely reporting of results. We partner with local, registered/certified technologists to provide services for your patients in your office.

### We are Physicians Helping Physicians

CardioRad's customers are comprised of primary care and internal medicine physicians; specialists including endocrinology, gastroenterology, hematology/oncology and fellow cardiology medical groups; clinical trials organizations, correctional institutions, hospitals, organ procurement organizations, rural health clinics and skilled nursing facilities.
